Education

Carleton University — Ottawa, Ontario, Canada

Bachelor of Computer Science, Co-op, Artificial Intelligence/Machine Learning Stream (3.94/4.0 GPA) — *Sept. 2021 – June 2026*

Technical Skills

Languages: Python, Java, JavaScript/TypeScript, Kotlin, C, C++, C#, Go, Rust, SQL, HTML/CSS, Powershell, Bash, YAML
Software: JMeter, Postman, Kafka, React, Node.js, REST APIs, MochaJS, Selenium, Robot Framework, UiPath, ServiceNow
Infrastructure/DevOps: Docker, Kubernetes, Terraform, AWS, Azure DevOps, CI/CD, Git, Linux, OpenStack, MongoDB
AI/ML/Data: pandas, NumPy, scikit-learn, Pytorch, TensorFlow, OpenCV, LLM APIs, LangGraph, RAG, Claude/Cursor Agentic Coding

Work Experience

Junior Automation Associate — July 2026 – Present

Export Development Canada — *UiPath, Python, ServiceNow*

- Build and update UiPath automations for repetitive business processes, including changes to bots already in production
- Write Python scripts and help design automation solutions for business workflows for the Automation CoE
- Document solutions and keep process inventories current in ServiceNow so the team can track and reuse automation work

Network Automation Intern — January 2025 – April 2025

Nokia — *Python, Power Platform, Power BI*

- Built and maintained a network automation use-case catalogue in Python, Power Platform, and Power BI so engineers and customers could search, reuse, and share solutions
- Recorded and produced technical demos for clients showing how automation was applied in real network scenarios

Software Test Specialist Intern — May 2024 – August 2024

Nokia — *Mocha, Selenium, WebdriverIO, OpenStack*

- Wrote end-to-end automated tests for the Network Service Platform using Mocha, Selenium, and WebdriverIO across simulated management and network scenarios
- Provisioned OpenStack and virtualized network function environments so features could be developed and tested
- Debugged failing regression suites, hardened flaky scripts, and shipped fixes with an Agile Scrum team using JIRA

Software Quality Assurance Analyst Intern — May 2023 – December 2023

Environment and Climate Change Canada — *Robot Framework, Selenium, JMeter, Azure DevOps*

- Grew automated UI and functional test coverage with Robot Framework and Selenium, cutting manual testing on government web applications
- Designed and executed functional test cases in Azure DevOps; tracked defects and verified fixes against business requirements
- Ran load and performance tests with JMeter, and evaluated Applitools for visual AI-based UI validation

Teaching Assistant — Fall 2025; Fall 2022 – Winter 2023

Carleton University — *Java, Python*

- Ran labs and office hours for Intro to Python, Object-Oriented Programming, and Discrete Structures
- Assisted students with course material and provided feedback on assignments

Projects

Traffic Flow Forecasting | *Python, OpenCV, YOLO, LSTM, pandas* — April 2026

- Built an end-to-end computer vision pipeline with YOLO object detection, multi-object tracking, and line-cross counting on traffic camera footage
- Trained and compared ARIMA baseline and LSTM models in Python to forecast traffic flow, improving prediction accuracy over traditional methods

Web Search Engine | *Node.js, Express, MongoDB, TF-IDF, PageRank* — March 2026

- Built a crawler and indexer with TF-IDF ranking and PageRank boosting, plus a REST API and browser UI over 600+ crawled pages

Neureset EEG Simulator | *Qt, C++, QCustomPlot* — April 2024

- Developed a Qt/C++ desktop app for patient management and therapy sessions with real-time EEG-style plotting; designed the system with UML
